

ABSTRACT

[0040] An air-bag is disclosed which has a vent hole formed therein. The periphery of the vent hole has first and second opposed part, wherein a tuck is formed in the air-bag. The tuck is formed in the region of the first part of the vent hole periphery such that the second part of the vent hole periphery extends past the first part in a direction extending substantially outwards from the interior volume of the air-bag, when the air-bag is inflated.
